

THE PERFECT **HARDWATER SOLUTION**

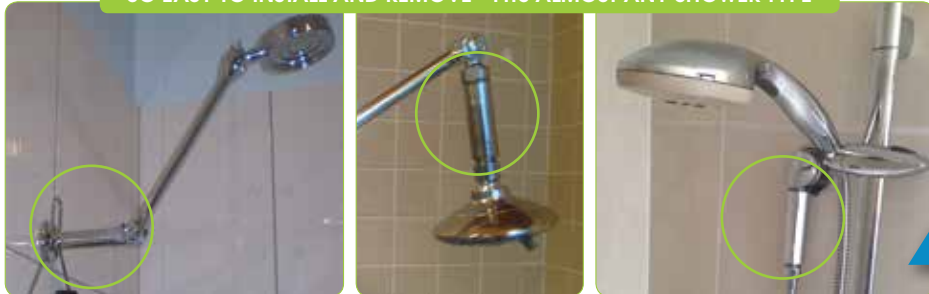

SHOWERS

dry or itchy skin after showering?
trouble getting a good lather?
hair feel dry or frizzy - even after using lots of hair conditioner?

If you answered yes to any question, then you are probably showering in hard water or water that has been softened using a "traditional salt softener". There is an easy solution... Installing a Showersoft water conditioner on your hand held or fixed shower only takes minutes and the benefits are fantastic!

- softer, wetter water to shower in.
- use less shampoo, conditioner and body wash - saving you money!
- your skin will feel great and won't itch. Why? Because the softer wetter water will wash the shampoo, conditioner and bodywash off your skin, leaving you feeling completely refreshed!
- no scaling issues with your showerhead!
- glass showerscreens will look cleaner and any recurring spots are more easily wiped away than ever before!
- you will find it much easier to get that 'real clean' feel on wall and floor tiles - no more scrubbing to get the scaly film off!
- you won't have to coat yourself in body cream after showering as your skin will feel great!

SO EASY TO INSTALL AND REMOVE - FITS ALMOST ANY SHOWER TYPE
